

# Take a Minute

Your Marketing Tip

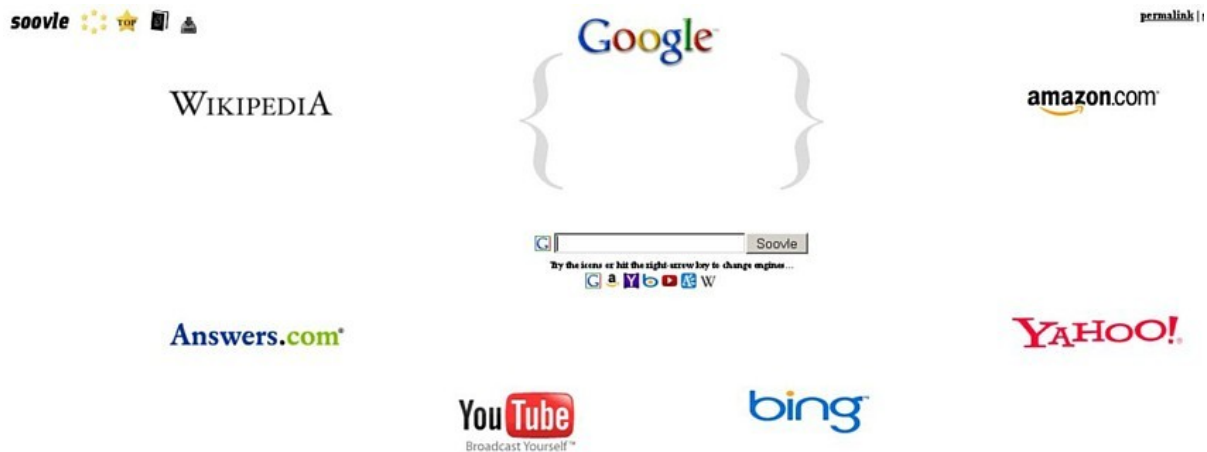

## Doing a Search Made Simpler with Soovle.com

It's very cool, easy-to-use, and you can decide what you do. Sounds good, doesn't it? Let's say you are researching something, and you decide that you want to check your search topic out on Google, YouTube, Yahoo, and Wikipedia. What you are not looking forward to is taking the time to go to each of these separately, and you also want to see how the different results look across social channels.

Use Soovle.com to search a bunch of specific sites at once, like the ones listed above. This is a great tool to use when you're looking for interesting keywords to use in your blog posts or advertising. Another use for Soovle is to test what the popular phrases are on the various search engines and see if there's any consistency.

Soovle.com is a simple service. Go to the website, type in a phrase or keyword and it will show you what comes up on Google, YouTube, Bing, Yahoo, Wikipedia, Answers.com, eBay, Weather Channel, Netflix and more.
